SAP S/4HANA

Managed Services for SAP® S/4HANA

End-to-end services for successful S/4HANA implementations

SAP® S/4HANA is SAP's next-generation business suite, **built on the modern, lightning-fast and advanced in-memory SAP HANA platform.**

SAP S/4HANA simplifies customer adoption, data models, user experiences (SAP Fiori®), decision-making and business processes. As an SAP-certified provider of hosting and SAP HANA operations, we provide solutions with greater speed and agility, while reducing risk. We deliver instant entry into S/4HANA without the cost or effort of maintaining the infrastructure that supports it.

Real-time data, customer experience and total cost of ownership differentiate S/4HANA from other business suites. Built on SAP's advanced in-memory platform, this solution is a shift from a database agnostic suite to the revolutionary in-memory computing platform. SAP HANA is deployable in the cloud or on premise. The choice is yours.

Your trusted partner

We provide a comprehensive, yet flexible approach to managing core system functionality for SAP business-critical applications, allowing companies to focus on core business initiatives and customer success. Our SAP HANA certification and managed application services are designed to simplify and secure enterprise applications across your organization.

We are much more than a hosting vendor. We strategically partner with clients for success over the long-term. Our mission is to help make our clients successful by enabling them to effectively solve their most critical business challenges.

Our SAP Basis Competency Center, composed of a team with hundreds of combined years of SAP hosting experience and certifications for SAP HANA, expertly accelerate SAP environments. Our SAP team is highly experienced in deploying, maintaining and operating Proof of Concept S/4HANA environments.

Key features of SAP S/4HANA

- Instant business intelligence
- All active data in-memory which removes data redundancy
- Fiori across all device lines
- Unlimited workload capacity (600 Bn scans/ server/second)
- Deployment options with guided configurations
- Data sources: social, text, geographic, graphic, processing

> We provide a comprehensive, yet flexible approach to managing core system functionality for SAP business-critical applications, **allowing companies to focus on core business initiatives and customer success.**

An integrated approach to governance, risk and compliance

Similar to security, maintaining compliance with legislative and other industry regulations requires both expertise and regular, advanced monitoring. Our integrated approach helps relieve much of the compliance burden for IT by aggregating and providing information for an audit quickly and accurately. Using an IT GRC to automate your business-critical audit processes of measuring and managing adherence to legislative policies, minimizes the impact of an audit.

Key benefits

Faster time-to-production
Eliminate the delays of purchasing and installing on-premises hardware

Increased speed and agility
Run your entire SAP landscape up to 7x faster

Enhanced reliability and security
Customized solutions and in-depth security services

Reduce IT spend and lower total cost of ownership (TCO)
Simply complex and expensive IT infrastructures

A trusted partnership

Faster time-to-production
Our core focus is to provide comprehensive managed cloud and clinical services with zero tolerance for down time.

Certification
SSAE16 Type II SOC 1 Certification (formerly SAS70 Type II) ensures compliance for operations and data centers.

Single platform
We own our data centers and control the entire solution stack (data centers, infrastructure, etc.).

Trusted expertise: Our SAP certifications
SAP-certified in cloud and infrastructure operations, hosting operations, and HANA operations.

Highest security
We use the most advanced monitoring technologies and top technologists to safeguard your assets 24/7. We provide multiple layers of security, including dual-biometric access and aligned ITIL processes.
