

Cloud Voice Readiness Assessment

Maximize the potential of your
intelligent workplace transformation

Your starting point for a successful migration

Migrating to a fully integrated cloud voice environment is complex and requires substantial effort and time.

Without sufficient analysis and design, you could be looking at higher costs, more risk exposure and longer delivery times than you'd anticipated.

Our **Cloud Voice Readiness Assessment** is based on our extensive experience with cloud migrations for clients in a range of industries, sizes and regions.

Following a sound methodology as well as a readiness checklist will help you move forward with your cloud voice transformation, knowing that all elements have been validated and designed to ensure success.

We chose NTT because we wanted their expertise. We were looking for a partner that had direct routing as a service that could deliver and manage on our behalf. We wanted a reliable world-class network in the background that we didn't have to worry about.

Mathew Often, Director of IT Identity and Collaboration Services, Informa

Our approach

We start by understanding the roles in your organization, then auditing your current infrastructure and business-critical applications. From there, we follow a modular approach to develop an achievable plan for seamlessly transitioning your organization to a cloud voice solution that supports your intelligent workplace transformation.

Assessment workshops

The assessment is delivered through one or more workshops that combine the technical and programmatic experience of NTT with your insights into your existing environment and transformational goals:

Core workshop

- Technical Readiness Assessment

Add-on (optional) workshops:

- Project Readiness Assessment
- Adoption and Change Management Readiness Assessment
- Managed Services Readiness Assessment

These workshops focus on the key areas of any successful delivery program: technical design, project management, adoption and training, and managed services. They can be delivered either remotely or on-site.

Business outcomes

Business and technical strategy alignment

We use the findings of our comprehensive audit and understanding of your current environment and future requirements, to help you develop a clear strategy so you can achieve your business objectives by migrating.

Cost optimization and ROI

We help you identify risks early to save the expense of costly surprises later. We also guide you on consolidating vendor solutions to meet your requirements.

Improved employee experience

Engage in the transformation with a clear idea of the positive and negative impact on users. Understand how to mitigate negative impacts and provide the required training to maintain and enhance productivity

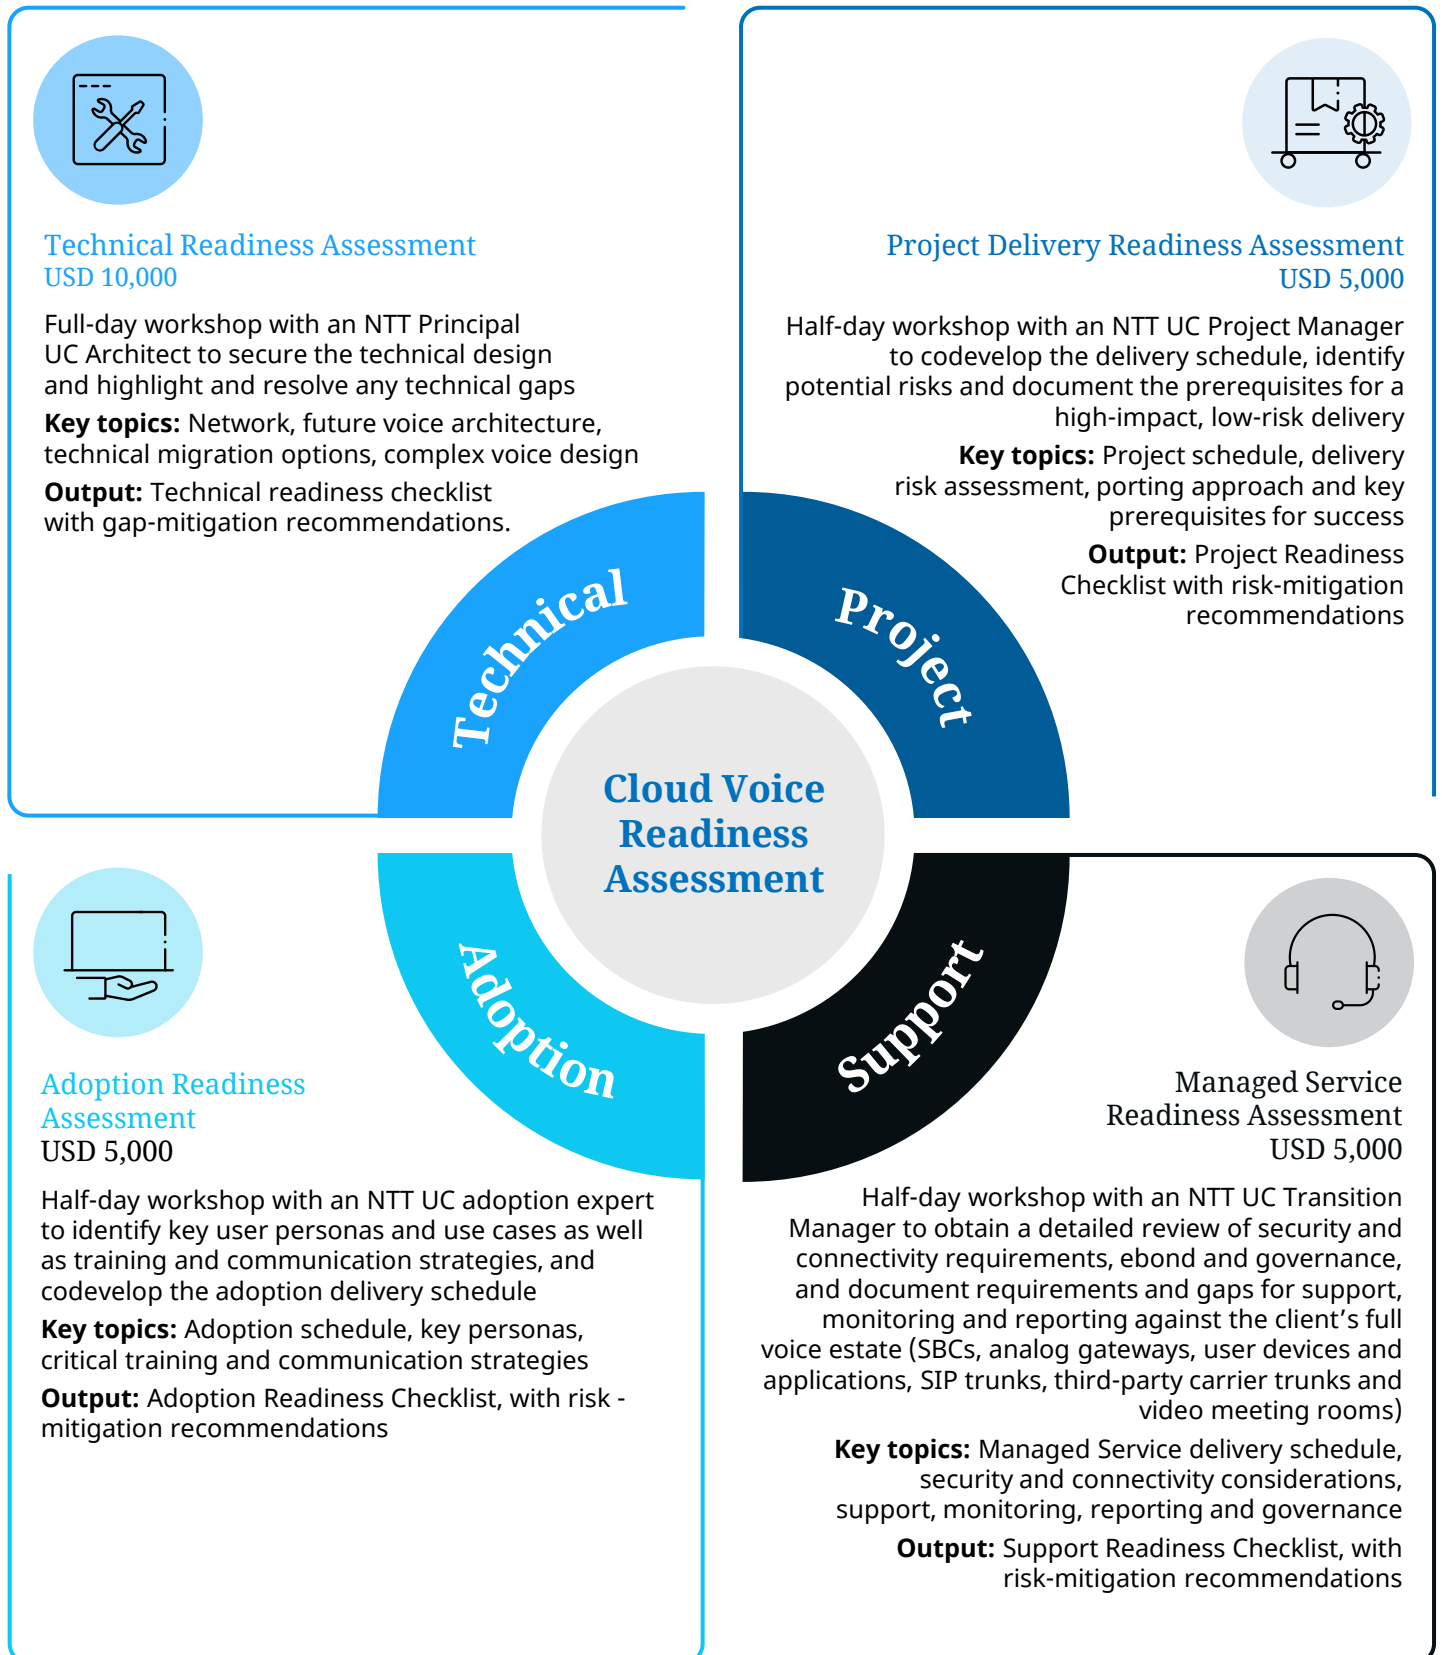

A realistic, achievable migration plan

With a comprehensive migration blueprint, you can move quickly after the engagement. Full network, voice, and application assessments ensure all aspects of the business and users are ready for the change.

We help you move forward with your cloud voice transformation knowing that all elements have been validated and designed to ensure success.

Cloud Voice Readiness Assessment workshops

All workshops can be delivered either remotely or on-site (your premises or ours)
